Authorization for this examiner's amendment was given in a telephone interview with Richard Ogawa on March 15, 2004.

The application has been amended as follows:

11. (As Amended) A method of operating an optical switching system, the method comprising:

tapping a first portion of an incoming data beam from an incoming source;

transferring the incoming data beam from the incoming source to a first path provided by a first MEMS based switching fabric;

transferring a monitoring source to monitor a second path of provided by second MEMS based switch fabric, while the second path of the second MEMS based switch fabric is in a stand by mode;

tapping a second portion of an outgoing data beam provided by the first MEMS based switching fabric; and

determining ~~if~~ a process condition of the first path by at least the second portion of the outgoing data beam.

Art Unit: 2877

The following is a clean copy of the amended claim:

11. A method of operating an optical switching system, the method comprising:
 - tapping a first portion of an incoming data beam from an incoming source;
 - transferring the incoming data beam from the incoming source to a first path provided by a first MEMS based switching fabric;
 - transferring a monitoring source to monitor a second path of provided by second MEMS based switch fabric, while the second path of the second MEMS based switch fabric is in a standby mode;

DETAILED ACTION

Allowable Subject Matter

Claims 1-15 allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious an optical switching system including: two switch fabrics comprising a plurality of MEMS coupled between input and output devices; two switch devices coupled to the first and second switch fabrics; and a control device coupled to the first and second switch device, in combination with the rest of the limitations of claim 1.

As to claim 11, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of operating an optical system including: transferring an incoming data beam from an incoming source to a first path provided by a first MEMS based switching fabric; transferring a monitoring source to monitor a second path provided by a second MEMS based switch fabric, while the second path of the second MEMS based switch fabric is in standby mode; and determining a process condition of the first path by at least the second portion of the outgoing data beam, in combination with the rest of claim 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
